Calibration Notes for 2006-2009 Honda Civic Si
ACCESSPORT Calibration Valet Mode v103

COMPATIBLE

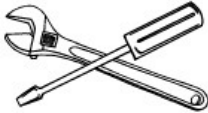

Compatible with ACCESSPORT

Calibration Name: Valet Mode v103

Latest Calibration Rev: 1.03

Calibration and Calibration Notes Updated: 10/30/09

Description: Valet Mode v103 - Valet Mode for 2006-2009 USDM/CDM Honda Civic Si vehicles with stock intake system. Rev limiter set to 4200 RPM.

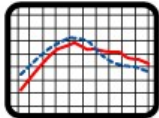

HARDWARE

Hardware Requirements: Stock vehicle with a STOCK INTAKE SYSTEM ONLY.

FUEL REQUIREMENTS

Fuel Requirement: Minimum 91 octane.

POWER OUTPUT

Power Output: Vehicle was not tested for power with this calibration.

Revision Notes:

1.03 - Updated to match updated performance maps.

1.02 - Updated to due match updated performance maps.

1.01 - 2007-2009 Civic Si performance calibrations updated to effectively remove speed limiter. The speed limiter does not exist on the 2006 Civic Si.

1.00 - Original calibration. This map is based on stock parameters with the rev limiter set at 4200 RPM. Low, soft rev limiter to discourage hard driving.

Additional Notes:

This calibration is designed to prevent abusive driving when using a valet service. A valet may reprogram the ECU with the AP. Of course, the valet would obviously need to be very motivated and have extra time on his/her hands in order to do this.

CEL Codes Defeated [WHEN USING AS REFLASH MAP] (means new to latest revision):**
